Go live & start interacting

Mic check. Make sure your phone is switched to "do not disturb" mode, your headphones are connected (bluetooth works best), and that you’re in a quiet place with good WiFi or cell reception. Because once you press the “go live” button, you’re on air for all to hear. What you do next is entirely up to you...

Play music

You can seamlessly toggle back and forth between the show and playlist screens. Once your first listener tunes into the show, you can press play on your song of choice from your playlist, and Amp will automatically begin the song and mute all mics - host and callers. You can add new songs, pause, resume, or end a song at anytime.

Note: Music will only play when there’s at least one listener.

Audio quality on the host side is reduced when playing music for latency reduction. However, listeners receive your show and the songs you play in a higher fidelity.

I don't have any listeners yet

That’s perfectly normal. To help your show stand-out to potential listeners, ensure you’ve selected at least two accurate topics (e.g. hip-hop + R&B), and included a show title that gives listeners clear and concise context on what to expect from your show.

While you’re waiting for listeners to join, scroll the web or your socials and react live to today’s news and events in the genres you care about.

Good examples

- Live reactions to Lakers v Utah
- Discussion: Go-To Sob Tunes + Call-in is on!

Bad examples

- Whose gonna take the w at staples tonight?
- I’ll show you mine if you show me yours - fav Sob tunes that is!

Pro tip: Scheduling your show at least 24 hours in advance makes it visible on the home screen, allowing potential listeners to discover, follow, and set notifications for your show.

Enable call-in

Now you’re live, you can enable the call-in feature by selecting the “invite callers” button. This will take you to the “add callers” page where you can enable the feature. When it’s not enabled, listeners won’t see the call-in button. When enabled, this is the screen where your caller requests will appear.

Caller requests

All caller requests will live on your “add callers” page. It’s up to your discretion if you invite them to speak or not. Once you select “invite”, the caller will automatically join, and be muted. So remind them to unmute when you ask them to introduce themselves.

Caller limit
We want to help you create engaging shows, easily. Up to five callers can be on any one show at a time. Like talk radio, hosts can end calls and invite new callers at any time.

Moderation
You’re in control of your show - who gets to speak, and when. Moderation tools available to you include: canceling call-in requests, removing callers, blocking callers, reporting callers, and disabling call-in requests entirely. You can do all this from your “show” or “add callers” screens. Tap their icon and a pop-up will appear with their profile and the options available to you. Amp takes community guidelines violations seriously. See Community Guidelines for more information on reporting and actions.

Muting & removing callers
All callers start muted, and show hosts can remove individual callers at any time. You can remove one or two, or all five, by clicking on their individual icons from your “show” screen, then selecting “remove”. You can do this when the conversation has finished, when the caller has bad reception, or someone is violating your show rules. When you play a song, all microphones are automatically muted. When the song ends, your mic will automatically unmute. But you’ll need to remind your callers to unmute when you’re ready for discussion.

Ending calls
To remove a caller for any reason, you can tap their icon and a pop-up with their profile will appear. From here you choose to remove them from the call, block and remove them, and or report them for violating Amp’s Community Guidelines.

Promote your shows to drive tune-in
While audio services like podcasts are designed for individual on-demand listening, Amp favors collective appointment viewing - all viewers tuning in together during the same time window. You can encourage appointment viewing by promoting your schedule and upcoming streams on social media, and with verbal shout-outs in your streams.

Ending shows
Just as easy as starting one. Click the “end show” button and your show and any calls or music will automatically end. You’ll immediately receive show analytics, then it’s time to schedule your next show!
